

# Google Cloud Helps Power More Personalized Experience for Procter & Gamble Consumers

Google Cloud's suite of machine learning and analytics solutions help drive decisions, provide connected experiences and advice.

Sunnyvale, CA, July 14, 2020 – Google Cloud today announced that [The Procter & Gamble Company](#) (NYSE:PG) has selected its data analytics and AI technology to enable more personalized experiences for consumers. Through this new collaboration, P&G will now be able to leverage consumer and media data to innovate product experiences and enrich the shopping journey for existing and new consumers.

In its more than 180 years, P&G has been at the forefront of innovation. P&G is now modernizing and integrating consumer, brand, and media data using cutting-edge cloud technology to deliver the next generation of consumer goods. Examples of how P&G is leveraging data to create superior consumer experiences include:

- Lumi by Pampers™, the award-winning, sleep routine system created by Pampers in partnership with Verily and Logitech, helps parents track day-to-day developments, and monitor their baby, 24/7, so they can see emerging behavior patterns and establish a suitable routine. It revolutionizes baby monitoring and helps parents to go beyond just vision to provide insight.
- P&G's recently launched Oral-B iO Series, which combines powerful, but gentle micro-vibrations with Oral-B's unique dentist-inspired round brush head design for a professional clean feeling every day.

P&G is migrating the company's first- and third-party consumer data from an on-premise solution to Google's cloud platform, and integrating them into an enterprise data and analytics data lake architecture, which will then use Google Cloud's BigQuery for real-time insights. By combining previously siloed data and using advanced analytics, Google Cloud will help create a 360-degree view of P&G's business across all of its channels, ultimately helping the CPG leader create seamless experiences for consumers.

Key components to the expanded partnership include:

- Optimizing data in a trusted environment: As P&G continues to expand its technology capabilities, a data-centric partnership was critical to enable P&G to be more automated, agile, and faster—while also ensuring the data privacy of its customers.
- Enriching the consumer experience: With Google Cloud technology, including BigQuery and TensorFlow, P&G will be able to create a richer product experience to consumers by incorporating consumer insights into future product development.
- Collaborating on a stronger technology offering: Google Cloud is partnering with P&G on a multi-cloud approach to support its needs across its technology stack.

"Connected devices offer new opportunities to provide actionable insights directly to consumers around their everyday habits," said Rob Enslin, President, Google Cloud. "We're thrilled to work with P&G to help them use the cloud and our deep portfolio of machine learning and analytics solutions to create more personalized experiences."

"We're always looking to ensure a great consumer experience across all our categories, from healthcare to beauty products and much more," says Vittorio Cretella, CIO, Procter & Gamble. "As a leader in analytics and AI, Google Cloud is a strategic partner helping us offer our consumers superior products and services that provide value in a secure and transparent way."

## About Google Cloud
