

Hackensack Meridian Health Deploys Google Cloud's Generative AI Tools to Improve Caregiver and Patient Experiences

Expanded partnership will enable generative AI-powered solutions to empower doctors, clinicians, and researchers with improved tools and personalized patient care

SUNNYVALE, Calif., and EDISON, N.J., Aug. 29, 2023 /[PRNewswire](#)/ -- Hackensack Meridian *Health*, New Jersey's largest health system, today announced an expansion of its strategic partnership with Google Cloud to deploy generative AI solutions to improve patient care and reduce the administrative burden on clinicians, caregivers, and hospital operators. The partnership will leverage Google Cloud's generative AI technologies to develop and deploy solutions that will help Hackensack Meridian *Health* allow clinical staff to focus more on care, improve overall decision-making, and better personalize the patient experience.

Administrative costs in 2022 in the U.S. alone increased by \$18 billion—30% in one year—to reach \$60 billion annually ([CAQH](#)). At the same time, healthcare generates about 30% of the world's data, and remains the fastest growing industry for data growth ([Brunswick Group](#)). It is no wonder that providers are increasingly turning to AI and machine learning to both reduce administrative burdens and unlock data for better patient care.

"Generative AI has the potential to revolutionize how we deliver care, making it more efficient, personalized, and effective," said Robert C. Garrett, FACHE, CEO of Hackensack Meridian *Health*. "Artificial Intelligence coupled with experienced clinicians will be a game-changer for our nation's healthcare system and potentially revolutionize how we deliver and receive care."

Google Cloud and Hackensack Meridian *Health* are currently working together on a broad digital transformation initiative, including programs that leverage analytics, artificial intelligence, and machine learning. The companies' generative AI work announced today will leverage Ekam, HMH's Cloud Data Platform built on Google Cloud, and will use Google Cloud's Vertex AI platform, which supports HIPAA compliance. HMH has identified three focus areas where AI can deliver impact:

- **Greater administrative efficiencies:** The new generative AI tools can help the hospital system automate manual and repetitive tasks, alleviating employee burnout, allowing staff to focus on patients, and improving the overall patient experience.
- **Enhanced clinical decision-making support:** The AI tools can help Hackensack Meridian *Health* analyze large patient data sets and identify patterns and trends. These insights can be used to help providers make better decisions about patient care.
- **Creating equitable patient experience and improving health literacy:** Hackensack Meridian *Health* will build an AI-based solution for dynamic, real-time, tailored experiences and communication that account for unique patient contexts and enable equitable outcomes. In addition, Hackensack Meridian *Health* plans to fuel patient education by offering coherent, tailored explanations that simplify healthcare jargon and adjust for language translation to provide new ways to clarify and confirm understanding.

"AI is the most profound technology in the world today. Whether it's helping doctors detect diseases earlier or enabling people to access information in their own language, AI is improving healthcare in remarkable ways," said Thomas Kurian, CEO Google Cloud. "Hackensack Meridian *Health* is setting an example for the healthcare industry by using generative AI to help improve both the employee and patient experience."

Google Cloud's approach to data governance and privacy policies ensures its customers retain control over their data. In healthcare settings, access and use of patient data is appropriately protected through the implementation of Google Cloud's reliable infrastructure and secure data storage that support HIPAA compliance, along with each customer's security, privacy controls, and processes. Google Cloud's responsible approach to generative AI also means customers have access to tools to directly tune large language models and to review model responses for biased or unvalidated content, teaching the model to avoid inappropriate outputs.

About Google Cloud

Google Cloud accelerates every organization's ability to digitally transform its business and industry. We deliver enterprise-grade solutions that leverage Google's cutting-edge technology, and tools that help developers build

more sustainably. Customers in more than 200 countries and territories turn to Google Cloud as their trusted partner to enable growth and solve their most critical business problems.

About Hackensack Meridian Health

Hackensack Meridian Health is a leading not-for-profit health care organization that is the largest, most comprehensive and truly integrated health care network in New Jersey, offering a complete range of medical services, innovative research and life-enhancing care. The network has 18 hospitals and more than 500 patient care locations, which include ambulatory care centers, surgery centers, home health services, long-term care and assisted living communities, ambulance services, lifesaving air medical transportation, rehabilitation centers, urgent care centers, physician practice locations, and a fitness and wellness center. With more than 35,000 team members and 7,000 physicians, Hackensack Meridian Health is a distinguished leader in health care philanthropy and committed to the health and well-being of communities throughout New Jersey.

The network's notable distinctions include having more U.S. News-ranked hospitals than any other health system in New Jersey, as ranked by U.S. News & World Report, 2022-23. Hackensack University Medical Center is nationally-ranked by U.S. News & World Report in four specialties, more than any other hospital in New Jersey. Joseph M. Sanzari Children's Hospital at Hackensack University Medical Center, and K. Hovnanian Children's Hospital at Jersey Shore University Medical Center, are ranked #1 in the state and top 20 in the Mid-Atlantic Region by U.S. News & World Report's 2022-23 Best Children's Hospital Report. Additionally, their combined nephrology program ranks in the top 50 in the United States.
